# Geological compilation of the Ungava Orogen (preliminary version)

Daniel Lamothe and Martin Simard

RP 2010-05(A)

**Keywords:** Ungava Orogen, Precambrian, Archean, Churchill, Superior, compilation, volcanism.

## Abstract

The purpose of this publication is to archive the 2007 version of the geological compilation for the Ungava Orogen. The map was generated using geological maps from SIGÉOM for the western half of the North and South domains, as well as for the Superior. For the North and South domains, the Kovik Antiform and the Narsajuaq Arc, the geology was extracted from maps 1721A to 1735A and 1911A to 1914A from the Geological Survey of Canada. For the purpose of the compilation, some contacts and units were modified after consulting the original documents.
