## AVANT-PROPOS

La carte des gîtes minéraux du Québec est une compilation de toutes les concentrations minérales connues sur le territoire du Québec. Elle constitue un moyen significatif pour la connaissance géologique et l'appréciation de la valeur minière des diverses régions du Québec, autant pour les substances métalliques que pour les minéraux industriels et les matériaux de construction.

Cette carte est basée sur les informations contenues sur les fiches de gîtes minéraux publiées par le ministère de l'Energie et des Ressources du Québec. Ces fiches présentent, sous forme résumée, les renseignements essentiels à la connaissance géologique de chaque concentration minérale de la province. De ce fait, la carte est un outil fort important pour toute personne intéressée à la recherche géologique et minière.

La carte des gîtes minéraux du Québec est publiée en parties correspondant à des régions du territoire: Abitibi, Laurentie-Saguenay, Appalaches, etc. Chacune de ces publications comprend un catalogue qui complète l'information apparaissant sur la carte.

### LA CARTE DES GITES MINERAUX

Réalisée sur le fond topographique à l'échelle de 1:250 000 du ministère de l'Energie, des Mines et des Ressources du Canada, elle est découpée conformément au niveau II du système national de référence cartographique (SNRC) couramment utilisé pour cette échelle. Elle comporte une information géologique et une information minérale.

#### INFORMATION GEOLOGIQUE

Celle-ci est fournie par les géologues du ministère de l'Energie et des Ressources du Québec. Les unités géologiques particulièrement favorables aux minéralisations sont mises en évidence à l'aide de figurés en surimpression.

#### INFORMATION MINERALE

Elle concerne la nature, la forme, la taille et l'identification des gîtes.

##### Nature des gîtes

La substance principale est identifiée par une couleur (sauf pour les matériaux de construction) et un symbole chimique ou abréviation. Les gîtes présentement ou anciennement exploités sont identifiés par un point noir précédant le symbole ou l'abréviation.

### Forme des gîtes

Celle-ci est définie par rapport à la roche encaissante et reflète généralement le mode de formation. Les formes symbolisées sur la carte sont les suivantes:

**Filon** - Remplissage minéral d'une faille ou d'une fracture; le contact avec la roche encaissante est généralement net.

**Amas** - Corps minéralisé, irrégulier, souvent constitué de nombreux filons et lentilles de faibles longueurs.

**Strate** (couche ou lit) - Minéralisation constituant un niveau ou un horizon particulier dans une roche sédimentaire, métamorphique ou magmatique. Elle est caractérisée par une continuité marquée.

**Cheminée** - Corps minéralisé tubulaire, lié le plus souvent aux intrusions volcaniques.

**Stockwerk** - Dense entrecroisement de filonnets courts et minces.

**Placer** - Sédimentation alluvionnaire.

**N.D.** - Forme non déterminée.

### Taille des gîtes

Les gîtes de substances métalliques et de minéraux industriels sont classés, d'après leur tonnage, en quatre tailles: petite, moyenne, grande, très grande. Les tailles des gîtes sans tonnage connu sont déterminées en fonction de paramètres tels que la largeur, la longueur, la superficie et le volume. Dans le cas des matériaux de construction, les tailles sont déterminées arbitrairement d'après le volume de la substance extraite par carrière.

Ce classement des gîtes n'est pas rigoureux puisqu'il repose sur des facteurs variables. Il est cependant significatif puisqu'il est basé sur une évaluation reliée aux contextes géologique et minier du Québec.

### Identification des gîtes

Le chiffre qui apparaît généralement à droite et au bas de la symbolisation pour chacun des gîtes provient de la fiche de gîte correspondante. Ce chiffre est en progression arithmétique à l'intérieur de quadrilatères correspondant au découpage SNRC de niveau III couramment utilisé pour l'échelle 1/50 000 (32D/12-4).

## LE CATALOGUE DES GITES MINERAUX

Le catalogue qui accompagne les feuillets d'une région donnée sert, comme il a été déjà mentionné, à compléter et à classer l'information apparaissant sur ces feuillets. Il comprend deux parties.

### PARTIE I

C'est un tableau des principales caractéristiques des gîtes. La présentation se fait par ordre alphanumérique des feuillets et, ensuite, selon le numéro d'ordre des fiches à l'intérieur des quadrilatères SNRC de niveau III sur chacun des feuillets. Les titres de colonnes appellent les commentaires qui suivent.

### Fiche de gîte

A l'intérieur de chacun des feuillets de la carte, présentés par ordre alphanumérique des coupures SNRC de niveau II (31K, 31L, ..., 32K, 32L), les fiches sont identifiées par un numéro composé de deux parties séparées par un tiret (32G/12-23). La première réfère au découpage SNRC de niveau III (31K/1, 31K/2, ..., 31K/16). La seconde partie est un chiffre en progression arithmétique obtenu en subdivisant le territoire de chaque découpage en quatre bandes de 3'45" de latitude chacune; puis en les balayant de l'ouest vers l'est en débutant par la bande nord.

### Canton/seigneurie

Cette colonne identifie le canton dans lequel se trouve chacun des gîtes. Cette information est utile pour la localisation des gîtes à l'intérieur des divisions administratives et cadastrales. A noter que les cantons sont dits proclamés ou projetés. Les premiers, qui portent un nom, sont des parcelles du territoire dont les côtés ont été arpentés; ces divisions cadastrales couvrent généralement 256 km<sup>2</sup>. Les seconds, non arpentés, sont identifiés par des nombres correspondant à un balayage du Québec à l'intérieur de bandes qui ont des parallèles tirés généralement dans le prolongement des cantons arpentés au sud du 53<sup>e</sup> degré de latitude et tirés à tous les 10' au nord de ce degré.

La seigneurie est une concession du domaine public qui remonte au début de la colonisation. On en dénombre environ 150, toutes identifiées par un nom. Elles ont généralement des configurations irrégulières.

### Gîte

**Nom** - Il s'agit de l'appellation donnée à un gîte au moment de sa découverte ou plus tard. A noter que plusieurs gîtes ne portent pas de nom.

**Forme** - L'éventail des formes est limité à quelques dénominations: filon (ou dyke), lentille, amas, strate (couche ou lit), cheminée, stockwerk et placer. Les formes non délimitées sont signalées par l'abréviation **N.D.**

**Taille** - Les chiffres 1, 2, 3, 4 correspondent, respectivement, aux petites, moyennes, grandes et très grandes tailles.

**Etat** - Ce mot réfère à l'état de développement des gîtes, lequel s'exprime par les lettres I, P, G, MA, CA, MF, CF.

I - INDICE: Minéralisation n'ayant fait l'objet d'aucun travail.

P - PROSPECT: Minéralisation ayant donné lieu à des travaux permettant de déterminer quelques paramètres dimensionnels, sans évaluation du tonnage.

G - GISEMENT: Minéralisation sur laquelle des travaux ont permis une évaluation du tonnage.

MA, CA, MF, CF - Mine (MA) ou carrière (CA) en exploitation. Les mines et carrières qui ont fermé leurs portes sont codées MF et CF.

**Substances** - Les substances principales rencontrées dans les gîtes sont signalées par des caractères gras; les autres, qui font partie de la minéralisation mais qui n'ont généralement pas d'importance économique, sont signalées par des caractères fins. La signification des symboles et abréviations est fournie sur une autre page.

### Ancien numéro de la fiche

Cette colonne du catalogue est nécessaire pour la seule région de l'Abitibi du fait que la désignation des fiches n'a commencé à se faire par référence au découpage SNRC qu'après production des feuillets de cette région. La désignation initiale, qui faisait appel aux divisions administratives ou cadastrales (cantons, seigneuries), a pu être reprise sur les feuillets 31K, 31L, 31N, 32B, 32I, 32K et 32L; elle ne l'a pas été sur les autres. Pour bien faire le joint avec les identifications tenant compte du découpage SNRC, on donne, pour chacun des gîtes, l'ancienne désignation de la fiche correspondante.

### PARTIE II

La deuxième partie du catalogue classe les gîtes minéraux par ordre alphabétique de leurs substances principales. La présentation, sous chaque substance, suit l'ordre alphabétique des feuillets et des numéros des fiches.

REGION DE L'ABITIBI

La partie de la carte des gîtes minéraux qui couvre l'Abitibi comprend 14 feuillets (figure 1). Les fiches utilisées pour la description et l'illustration des gîtes sur chacun des feuillets ont été publiées sous les numéros suivants dans la série de publications DP.

Feuille	DP	Feuille	DP	Feuille	DP
31K	654	32B	648	32G	600
31L	645	32C	612	32I	642

SYMBOLES ET ABREVIATIONS POUR LES SUBSTANCES

Substances métalliques

Antimoine - Sb	Palladium - Pd
Argent - Ag	Platine - Pt
Arsenic - As	Plomb - Pb
Béryllium - Be	Pyrite - py
Bismuth - Bi	Pyrrhotine - po
Cadmium - Ca	Rhodium - Rh
Césium - Ce	Ruthénium - Ru
Chrome - Cr	Sélénium - Se
Cobalt - Co	Tantale - Ta
Cuivre - Cu	Tellure - Te
Fer - Fe	Terres rares - Tr
Lithium - Li	Thorium - Th
Manganèse - Mn	Titane - Ti
Molybdène - Mo	Tungstène - W
Nickel - Ni	Uranium - U
Niobium - Nb	Vanadium - V
Or - Au	Zinc - Zn

Minéraux industriels

Amazonite - az	Dolomie - do	Néphéline - ne
Amiante - asb	Feldspath - fd	Pyrophyllite - pl
Apatite - ap	Fluorine - fr	Silice - sil (2)
Barytine - ba	Graphite - gp	Sillimanite - sm
Diatomite - di	Grenat - gr	Staurotide - st
Disthène - ds	Mica - mi (1)	Talc - tl

Matériaux de construction

Calcaire - ca
Gabbro - gb
Granit - gt (3)
Grès - gc
Marbre - ma

(1) Comprend phlogopite et muscovite

(2) Comprend grès et pegmatite riches en SiO<sub>2</sub>

(3) Toute roche ignée utilisée pour fins industrielles.
