100.50	194.50	I2D V3B - I2D V3B - Syénite avec 25 à 50% de basalte - Syenite avec basalte (50/50%), magnetique localement, peu fracturées. Cette syenite contient des blocs heterogene, arrondis souvent, les aureoles paraissent cuites. Cette syenite semble ramasser un materiel polygenique, probablement en traversant les - parois d'une cheminée ?? Epidotisée par endroit, et brechique dans qq niveaux. Le basalte, ou la roche mafique digérée par cette syenite est porphyrique de 112,5-113,5m Pyrite 1%, en amas localement.	V442618	79.00	80.50	1.50	0.047
